</table>
| ENV 201: Environmental Sciences | Two must be from the same department | One course each from the other two tracks from the Depth Courses: | ENV 498: Capstone I
| ENV 202: Environmental Social Sciences | One must be a methodology course | For example, if you choose Humanities for the Depth component, your Breadth component will consist of one course from Natural Sciences and one course from Social Sciences. | ENV 499: Capstone II
| ENV 203: Environmental Humanities | Maximum of one at the 100-level | If you self-design the Depth component, you will also self-design a corresponding Breadth component, again with the approval of the ESFAC. | The capstone project is interdisciplinary, research-based, and culminates in a major paper or other significant project. Senior majors enroll in ENV 498 in the fall and in ENV 499 in the spring.

All three are required for the major and may be taken in any sequence. Two must be completed by the end of the sophomore year, and the third by the end of the junior year.

With the approval of the ESFAC, students may also self-design a Depth component around a topic or issue.

ENV 498 proposals are due no later than the end of the first week of class of the fall semester of the senior year; ideally, students will submit these proposals at the end of the junior year.
